Write a service(model) in nestjs where it will serve database transaction for all the 12 routes you have created for your user category. You must define your user-category's Entity and make sure All the Http methods must work as per their description.

GET: The GET method is used to retrieve data from a server. It can get single data or multiple data based of input given by user.

POST: The POST method is used to submit data to a server for processing. It is used to create a new resource on the server.

PUT: The PUT method is used to update a current resource on the server.

PATCH: The PATCH method is used to update a current resource on the server. It is used to make partial updates to a resource, as opposed to replacing the entire resource with a PUT request. The PATCH method is not idempotent.

DELETE: The DELETE method is used to delete a resource on the server.
